

Ideation Phase

Brainstorm & Idea Prioritization Template

Date: _____

Team ID: _____

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 4 Marks

This template follows the three-step structure: Step-1 Team Gathering, Collaboration and Select the Problem Statement; Step-2 Brainstorm, Idea Listing and Grouping; Step-3 Idea Prioritization.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement: How might we implement a Client Script and UI Policy on the Incident form to dynamically control field behaviour, improve data quality, and provide a consistent user experience?

Team Member	Role / Perspective	Key Problem or Need
1. _____	_____	_____
2. _____	_____	_____
3. _____	_____	_____
4. _____	_____	_____

Step-2: Brainstorm, Idea Listing and Grouping

Generate ideas freely first. The following project-specific idea categories can be used to organize the team's brainstorming results.

Idea No.	Brainstormed Idea	Group / Category
1	Use a Client Script to set or validate Incident field values based on user input.	Client Script Logic
2	Use a UI Policy to make fields mandatory, visible, or read-only under defined conditions.	UI Policy / Field Behaviour
3	Combine Client Script and UI Policy conditions without creating conflicting behaviour.	Integration
4	Control Incident fields based on priority, category, state, or other field values.	Dynamic Conditions
5	Provide clear behaviour for matching and non-matching conditions.	Consistency
6	Add test cases for different Incident states, categories, priorities, and user inputs.	Testing
7	Validate empty, invalid, or unexpected field values before applying changes.	Validation
8	Keep scripts reusable, readable, and limited to client-side responsibilities.	Maintainability
9	Create an administrator-friendly configuration and troubleshooting guide.	Documentation
10	Define fallback behaviour when required Incident information is unavailable.	Error Handling

Additional team ideas:

11. _____
12. _____
13. _____
14. _____
15. _____

Step-3: Idea Prioritization

Use the team's agreed criteria to compare ideas. Record the score or decision in the final column.

Idea	User / Data Impact	Implementation Effort	Clarity / Maintainability	Priority / Decision
Client Script for dynamic Incident field behaviour	High / Med / Low	High / Med / Low	High / Med / Low	_____
UI Policy for mandatory / visible / read-only controls	High / Med / Low	High / Med / Low	High / Med / Low	_____
Combined Client Script + UI Policy design	High / Med / Low	High / Med / Low	High / Med / Low	_____
Incident condition and testing matrix	High / Med / Low	High / Med / Low	High / Med / Low	_____
Validation and fallback handling	High / Med / Low	High / Med / Low	High / Med / Low	_____
Maintainable script and configuration pattern	High / Med / Low	High / Med / Low	High / Med / Low	_____

Final Selected Idea / Concept	Reason for Selection	Next Action
_____	_____	_____
_____	_____	_____

Project focus: The brainstorming is centered on implementing and coordinating Client Script and UI Policy behaviour on the ServiceNow Incident form.
