

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date: _____ **Team ID:** _____

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Client Script Configuration	Configure a Client Script on the Incident form and identify the field values/events that control the required behaviour.
FR-2	Dynamic Field Behaviour	Use the Client Script to validate, set, clear, or dynamically respond to Incident field changes as required.
FR-3	UI Policy Configuration	Create UI Policies to make Incident fields mandatory, visible, or read-only based on defined conditions.
FR-4	Validation & Exception Handling	Handle empty, invalid, or unexpected field values and define clear fallback behaviour for the Incident form.
FR-5	Testing & Maintenance	Validate Client Script and UI Policy behaviour across relevant Incident states, categories, priorities, and user interactions; allow administrators to maintain the rules.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Incident field behaviour and conditions should be clear enough for users and administrators to understand and maintain.
NFR-2	Security	Client-side controls should support the intended form behaviour without being treated as a replacement for server-side security controls.
NFR-3	Reliability	The Client Script and UI Policy should produce consistent behaviour for the same Incident values and form context.
NFR-4	Performance	Client-side evaluation should add minimal overhead and avoid unnecessary script processing.
NFR-5	Maintainability	Scripts and policies should be readable, reusable where appropriate, and easy for administrators to update.
NFR-6	Scalability	The design should support additional Incident fields, conditions, and related business rules as requirements grow.

Project scope note: These requirements adapt the uploaded Solution Requirements structure to Incident Client Script and UI Policy implementation. ■filecite■turn1file4■L6-L27■
