

Project Design Phase-II

Data Flow Diagram & User Stories

Date: _____ Team ID: _____ Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 4 Marks

Data Flow Diagram – Level 0

External Entity / Process	Data Flow	Data Store / Output
User (Creates / Updates Incident)	Incident input + field changes	Incident Form
1. Incident Form Evaluation	Field values + form context	Client Script / UI Policy
2. Dynamic Field Behaviour	Condition evaluation	Mandatory / Visible / Read-only state
Incident Record	Updated field values	ServiceNow Incident Data Store
Administrator	Configuration / test input	Client Script & UI Policy configuration

DFD interpretation: The user enters or changes Incident information; the form evaluates configured conditions through Client Script and UI Policy; the resulting field behaviour is applied and the Incident can be submitted when required validation is satisfied.

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Incident Form Configuration	USN-1	As an administrator, I can configure a UI Policy for an Incident condition.	Condition and affected fields are correctly configured.	High	Sprint-1
Administrator	Client Script Logic	USN-2	As an administrator, I can configure a Client Script for required Incident form behaviour.	Script runs on the intended form event and produces the expected result.	High	Sprint-1
User	Dynamic Field Behaviour	USN-3	As a user, I can see Incident fields become mandatory, visible, or read-only when conditions apply.	Field state matches the configured condition.	High	Sprint-1
User	Validation	USN-4	As a user, I receive clear form behaviour when Incident field values are missing or invalid.	Invalid or incomplete input is handled as configured.	High	Sprint-1
Administrator	Validation & Testing	USN-5	As an administrator, I can test different Incident values and form states.	Representative scenarios produce expected outcomes.	High	Sprint-2
Administrator	Maintenance	USN-6	As an administrator, I can update Client Script or UI Policy conditions when requirements change.	Changes can be tested without unintended effects.	Medium	Sprint-2
Administrator	Documentation	USN-7	As an administrator, I can document the controlled fields, conditions, and expected behaviour.	Documentation identifies conditions and expected field states.	Low	Sprint-3
