

Ideation Phase – Empathize & Discover

Date: _____ Team ID: _____

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 4 Marks

Empathy Map Canvas

User persona: Incident User / Administrator responsible for consistent Incident form behaviour

SAYS	THINKS
• “I should know which Incident fields I need to complete.” • “The form should respond clearly when I change values.” • “The field rules should be consistent.”	• “Will the Client Script react to the field change correctly?” • “Will the UI Policy make the right fields mandatory or read-only?” • “Could conflicting rules affect the form?”
DOES	FEELS
• Creates and updates Incidents. • Changes field values based on the issue. • Tests or configures form behaviour for different Incident conditions.	• Frustrated when field behaviour is unclear. • Concerned when required fields are not obvious. • More confident when the form behaves predictably.
PAINS	GAINS
• Confusing field requirements. • Complex or conflicting Client Script/UI Policy logic. • Difficulty validating behaviour for different values. • Unexpected field states after changes.	• Fields respond according to defined conditions. • Required/visible/read-only states are consistent. • Administrators can understand and test the configuration. • Users can complete Incidents with fewer errors.

This canvas follows the uploaded template's focus on behaviours, attitudes, goals, challenges, pains, and gains from the user's perspective.
