

Project Planning Phase

Planning Logic

Date: _____ Team ID: _____ Project Name: Implement Client Script & UI Policy (Incident)

Planning Concepts

Following the uploaded Planning Logic template, a Sprint is a fixed period in which the team works to complete a set of tasks; an Epic is a larger task broken into smaller stories; a Story is a small task within an Epic; and Story Points represent the effort required to complete a story. The source uses Fibonacci-style values 1, 2, 3, and 5.

Sprint 1

Sprint Story / Task	Story Point
Incident UI Behavior (Epic 1) – Configure UI Policy for Incident form and target field (USN1)	2
Define expected Incident field condition and resulting UI state (USN2)	2
Client Script Evaluation (Epic 2) – Create/configure Client Script to evaluate Incident field values (USN3)	3
Implement required client-side behavior based on the condition (USN4)	3
Incident Form Behavior (Epic 3) – Apply configured behavior when condition matches (USN5)	2

Total Story Points in Sprint 1 = 2 + 2 + 3 + 3 + 2 = 12

Sprint 2

Sprint Story / Task	Story Point
Incident Form Behavior (Epic 3) – Apply configured behavior when condition does not match (USN6)	2
Validation & Testing (Epic 4) – Test matching and non-matching Incident field values (USN7)	3
Handle missing, empty, invalid, or unexpected Incident values (USN8)	2
Maintenance & Audit (Epic 5) – Update Client Script/UI Policy when requirements change (USN9)	2

Total Story Points in Sprint 2 = 2 + 3 + 2 + 2 = 9

Sprint 3

Sprint Story / Task	Story Point
Maintenance & Audit (Epic 5) – Document Incident field, condition, expected UI behavior, and test results (USN10)	1
Validation & Testing (Epic 4) – Final end-to-end validation of representative Incident records and form states (USN11)	2

Total Story Points in Sprint 3 = 1 + 2 = 3

Total Story Points and Velocity

Measure	Calculation	Result
Total Story Points	Sprint 1 + Sprint 2 + Sprint 3	12 + 9 + 3 = 24
Number of Sprints	planned sprints	3
Velocity	Total Story Points Completed / Number of Sprints	24 / 3 = 8 Story Points per Sprint

Planning note: the velocity above is a planned/projected velocity derived from the assigned story points in this document. The uploaded example calculates velocity from total story points divided by the number of sprints; actual team velocity should be recalculated from completed story points after execution.
