

Project Design Phase

Proposed Solution Template

Date: _____ Team ID: _____ Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 2 Marks

Proposed Solution Template:

The following project-specific information is structured according to the six parameters in the uploaded template.

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Incident users need consistent guidance and dynamic field behaviour when creating or updating records. Field requirements may change according to Incident data, and static form behaviour may not provide the required experience.
2	Idea / Solution description	Implement Client Scripts and UI Policies on the Incident form. UI Policies control field visibility, mandatory status, and read-only state based on conditions; Client Scripts perform client-side validation or dynamic actions when the relevant form events occur.
3	Novelty / Uniqueness	The solution combines declarative UI Policies with targeted Client Script logic to create a reusable pattern for data-driven Incident form behaviour across different fields and conditions.
4	Social Impact / Customer Satisfaction	The solution supports more complete and consistent Incident data entry. Users receive clearer guidance while administrators gain a configurable and testable mechanism for managing form behaviour.
5	Business Model (Revenue Model)	The solution is an enterprise ServiceNow configuration capability. Potential value can be realized through implementation, configuration, customization, maintenance, training, and managed-service engagements. No specific pricing model is prescribed.
6	Scalability of the Solution	The pattern can be extended to additional Incident fields, conditions, form events, and related use cases. Reusable script patterns, standardized UI Policies, and testing can support future growth.
