

Project Development Phase

Model Performance Test – Machine Learning

Project Name: Implement Client Script & UI Policy (Incident)

Date		Team ID	
Project Name	Implement Client Script & UI Policy (Incident)	Maximum Marks	

Model Performance Testing: Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values / Screenshot
1	Metrics – Regression Model	Not applicable. The core solution is not a regression model; it uses deterministic Client Script and UI Policy logic to evaluate Incident field values and form conditions. N/A
	MAE / MSE / RMSE / R ² Score	MAE – N/A; MSE – N/A; RMSE – N/A; R ² Score – N/A. Functional validation should instead compare expected Incident-form behavior with actual results.
	Classification Model	Not applicable. The core solution does not train a classification model. Incident-form behavior is determined by configured Client Script and UI Policy conditions. N/A
	Confusion Matrix / Accuracy Score / Classification Report	Confusion Matrix – N/A; Accuracy Score – N/A; Classification Report – N/A. Functional validation should compare expected outcomes with actual Client Script/UI Policy results. Test-case evidence can be attached here.
2	Tune the Model – Hyperparameter Tuning	Not applicable. There is no trained ML model or hyperparameter set in the proposed solution. Improvements are made by refining UI Policy conditions, Client Script logic, validation, and test cases. N/A
	Validation Method	Rule-based functional validation: test matching and non-matching field values, missing/empty values, invalid/unexpected values, and relevant Incident-form contexts; verify that each actual result matches the expected behavior.
