

Project Development Phase

Model Performance Test – Artificial Intelligence

Project Name: Implement Client Script & UI Policy (Incident)

Date		Team ID	
Project Name	Implement Client Script & UI Policy (Incident)	Maximum Marks	

Model Performance Testing: Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values / Screenshot
1	Model Summary	No separate Artificial Intelligence / Machine Learning model is required for the core solution. The Incident form behavior is produced by ServiceNow Client Script and UI Policy logic that evaluates configured field values and form context.
2	Accuracy – Training Accuracy	Not applicable. This solution uses deterministic Client Script and UI Policy logic rather than a trained predictive model. N/A
	Validation Accuracy	Not applicable as an AI-model metric. Validation is performed through functional test cases covering matching, non-matching, missing, empty, invalid, and unexpected Incident field values. Test-case evidence / form-result screenshots.
3	Fine Tuning Result (if Done)	Not applicable to the core solution. Improvement is performed by refining Client Script logic, UI Policy conditions/actions, validation handling, and test cases rather than by model fine-tuning. N/A – configuration/version evidence if changes are made.
	Validation Result	Validation success should be measured by whether the expected Incident-form behavior matches the configured conditions across the defined test cases. Validation test evidence.
