

Project Development Phase

Model Performance Test – Salesforce

Project Name: Implement Client Script & UI Policy (Incident)

Date		Team ID	
Project Name	Implement Client Script & UI Policy (Incident)	Maximum Marks	

Model Performance Testing: Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values / Screenshot
1	Model Summary	ServiceNow Incident automation setup using Client Script and UI Policy. The Client Script controls dynamic form behavior and validation based on Incident field values; the UI Policy controls field visibility, mandatory state, or read-only behavior according to configured conditions. Access/behavior outcomes can be evidenced with configuration and Incident-form screenshots.
2	Accuracy	Training Accuracy - N/A. Validation Accuracy - N/A. The solution is rule-based rather than a trained predictive model. Validation should confirm that the configured Client Script and UI Policy produce the expected Incident-form behavior for matching, non-matching, empty, invalid, and unexpected field values.
3	Configuration / Validation Result	Configuration validation - verify the Client Script and UI Policy conditions, target fields, and actions. Functional validation - compare expected field behavior with actual Incident-form results. Attach screenshots of configuration and test outcomes.
4	Test Evidence	Screenshots / test results showing Incident form rendering, condition evaluation, field visibility, mandatory state, read-only state, and Client Script execution.
